

Groundline Engineering to Open in the United Kingdom

Nottinghamshire, 25th September 2015

Groundline Engineering announced today that Mr Daniel Taylor, the New Zealand Trade Commissioner to the United Kingdom and Ireland, will be officially opening Groundline Engineering's United Kingdom offices on 1st of October. The event will take place at The Goosedale Conference Centre near the Groundline Engineering office at Sherwood Park, Nottinghamshire.

The official opening event will be attended by representatives from across the power distribution industry and will give Groundline the opportunity to showcase the services they are bringing to the United Kingdom, as well as several of their own innovative and practical technologies. This will be the first time the industry in the UK has seen both QandA software and the Thor Pole Tester developed and used by Groundline Engineering throughout Australia and New Zealand. Groundline will be officially introducing Mr Adam Yates as the new General Manager for the company in the United Kingdom. Adam officially joined the company in July and brings a wealth of knowledge about the UK transmission industry.

Director and Founder Mr Ian Flatley sees this as a strong move for Groundline and says, "Operating our company as one team on both sides of the globe means we will be able to bring the relevant expertise together to meet each clients' needs. It is also a fantastic opportunity to share our experience, knowledge and technologies across the different geographic markets, and will also add to the strong relationships that already exist between Australia, New Zealand and the UK."

Groundline Engineering is a leading provider of high quality transmission and distribution line consultancy services, based in New Zealand and Australia. Its success is based on its knowledgeable and adaptable team of skilled engineers. The company is keen to establish itself as a key player in the UK market using its engineering expertise in power line engineering and utility asset management, consultancy and field services. Groundline has and is committed to significant investment in research and development bringing the latest in technical innovations through the clever use of GPS, cloud, ICT and seismic technologies.
